

Your roof does more than cover your home, it protects your biggest investment. Many Oregon homeowners are rethinking traditional shingle roofs and turning to metal roofing for long-term strength, energy savings, and peace of mind.

Roof Smarter, Not Harder

At Liberty Sheet Metals, we help homeowners protect their most valuable investment – their home. Our custom metal roofing systems are designed to withstand Oregon's rainy winters, high winds, and changing seasons, all while adding lasting beauty to your property.

- **Eco-Friendly | 100% Recyclable**

Unlike asphalt shingles, which often end up in landfills after replacement, metal roofing is made from recycled materials and is 100% recyclable at the end of its lifespan. That means when it's time for a new roof decades from now, your old one can be reused rather than wasted. Choosing a metal roof reduces landfill waste, supports eco-friendly manufacturing, and contributes to a more sustainable home.

- **Lifespan | A Roof That Truly Lasts**

One of the biggest advantages of metal roofing is its impeccable lifespan. While a standard asphalt shingle roof typically lasts 20-30 years, a properly installed metal

roof can protect your home for 50-70 years or more. That's double or even triple the life of most traditional roofing systems.

This long-term durability means fewer replacements, less maintenance, and more savings over time. Metal roofs are engineered to withstand rain, snow, wind, and UV rays, making them ideal for Oregon's changing weather. It's a one-time investment that keeps paying you back in protection and peace of mind for decades to come.

Schedule your free metal roofing quote today with Liberty Sheet Metals—let's build a roof that lasts a lifetime. Call us now at **(503) 640-3954** to get started.

[Request an Estimate](#)

| | Metal Roofing Panels | Asphalt Architectural Shingles |
|------------------------------|--|---|
| Lifespan | 50+ years | 20-30 years |
| Maintenance | Resistant to mold, mildew, rot | Periodic inspections are recommended, especially in areas prone to hail or high winds |
| Weather Resistance | Built to withstand extreme weather; protection year-round | Less effective in extreme weather; extended sun exposure may cause shingles to curl or crack |
| Energy Efficiency | Durable, reducing energy and reflective coatings that reduce heat absorption | "Cool roof" granules may fade over time, reducing effectiveness |
| Fire Resistance | Non-combustable, class A certified. Excellent protection against wildfires and external flames | Highly combustible |
| Sustainability | 100% recyclable | Made from non-renewable resources. Uses energy and emits greenhouse gases |
| Cost | Initial material costs are higher, minimal upkeep, obtains value over time | Costs less upfront, requires more maintenance and depreciates value over time |
| Aesthetic & Style | Modern appeal, variety of styles, wide color selection, customizable | Variety of colors, dimensional look, fades over time, limited custom textures |
| Investment | Higher upfront cost, but decades of durability, low maintenance, and energy savings make it a smart long-term choice | Affordable upfront, with good protection and style, but shorter lifespan and more maintenance |

Don't wait for leaks or winter storms—upgrade your roof now and protect your home for years to come.
